

RFQ # 046-08

QUESTIONS AND ANSWERS

Question: You requests bottles of 10 ml (10mg/ml). Do you mean a injection solution? Then you would receive 10 mg vials of 1 ml. Methadone is also available as drops, tablets and suppositories.

Answer: Methadone solution chloride that we required is to be used as a substitution therapy for Injecting drug users in Methadone Maintenance Treatment Center, so we don't require injecting solution.

-Considering that this therapy is given orally, under surveillance of medical workers, and unit of measure is drop it is necessary that we have methadone solution packed in bottles with solution for oral use (drops)
